To Whom It May Concern,

Sterile Space Infection Defense came into our learning center before the start of the new school year, at the end of August. In previous years, we have not had any real issue or concern as it pertains to illness in the school. However, disinfecting duties and schedules are a huge portion of the staff's day. The services provided by Sterile Space Infection Defense and the products they use have made our school that much easier to keep clean and sterile. The results of all the swab tests taken since the treatments were done in August still amaze us. The reduction in the amount of germs was better than 96% reduced. After the follow up reading I was so amazed at the results, I purchased two bottles of the solution to use both in my home and in my husband's office.

The Sterile Space Infection Defense treatment done to our school is a big success and we couldn't be happier.

Thank you,

Donna Giardino

Director
